

HEALTH CARE KIOSK WITH HANDICAPPED ACCESSIBLE SEAT

Charles Bluth and James Bluth

ABSTRACT OF THE DISCLOSURE

A health care test kiosk includes a carrel body that supports a console housing and has a vacant knee-space beneath the console housing. The carrel body includes a support side panel forming a lateral side and extending beyond the console housing and the knee-space. A physiological test interface is connected to and supported by the carrel body on the support side panel. A retractable seat is movably connected to the support side panel of the carrel body for selective positioning in a location ranging from withdrawn into the knee-space beneath the console housing to extended completely from the knee-space.
